Vol. 3

July 1943

No. 1

Beginning with the July 1943 issue, Sections A - F of the Bibliography of Agriculture, are combined and are issued as a single monthly publication. Its scope has been broadened to include human nutrition, the animal industry and other agricultural subjects not previously covered in our current lists. This bibliography is organized in three parts:

Part I. Publications received in the Library of the United States Department of Agriculture.

Part II. Periodical Literature, Classified by Subject.

Part III. Author and Subject Indexes.

Since Part I is not arranged by subject, the Index should be consulted for the subject matter contained in books and pamphlets, in publications of the United States Department of Agriculture, and in publications of the State Agricultural Experiment Stations and the State Agricultural Extension Agencies.

Free distribution of the Bibliography of Agriculture is limited to Federal, State and other public agencies. Those to whom free copies cannot be supplied, may purchase this publication from the Superintendent of Documents, Washington, D. C.

UNITED STATES DEPARTMENT OF AGRICULTURE

LIBRARY

BIBLIOGRAPHY OF AGRICULTURE

Vol. 3

August 1943

No. 2

Beginning with the July 1943 issue, Sections A - F of the Bibliography of Agriculture are combined and are issued as a single monthly publication. Its scope has been broadened to include human nutrition, the animal industry and other agricultural subjects not previously covered in our current lists. This bibliography is organized in three parts:

- Part I. Publications Received in the Library of the United States Department of Agriculture.
- Part II. Periodical and Serial Literature, classified by subject.
- Part III. Author and Subject Indexes.

Since Part I is not arranged by subject, the Index should be consulted for the subject matter contained in books and pamphlets, in publications of the United States Department of Agriculture, and in publications of the State Agricultural Experiment Stations and the State Agricultural Extension Agencies.

Free distribution of the Bibliography of Agriculture is limited to Federal, State and other public agencies. Those to whom free copies cannot be supplied, may purchase this publication from the Superintendent of Documents, Washington, D. C. Subscription price, \$3.75 per year. Single copies may be obtained for 35 cents.

Washington, D. C.

U. S. D. A. Miscellaneous Publication 337, Abbreviations Used in the Department of Agriculture for Titles of Publications, is followed in this publication.

Items marked with an asterisk (*) are ordinarily available in microfilm or photoprint only.

Except for printed publications of the Department of Agriculture, which are usually available in limited supply for free distribution, the publications listed herein are not available for free distribution from the Department. However, photoprint or microfilm copies of any publication listed may be obtained from the Library at the following prices:

MICROFILMS:

Periodical Articles.--A flat charge of 50 cents for any single article, from any single volume of a periodical, regardless of the length of the article.

Books and Serial Publications.--50 cents for each 50 pages or fraction thereof.

PHOTOPRINTS:

10 cents for each page of text, with a minimum charge of 50 cents per item.

Scientific note.
Tests showed definite toxic properties, but the authors believe that rotenone is not primarily responsible. The possibility of an annual crop makes it a potential rotenone substitute.

BIBLIOGRAPHY OF AGRICULTURE

Vol. 3

September 1943

No. 3

Beginning with the July 1943 issue, Sections A - F of the Bibliography of Agriculture were combined in a single monthly publication. The scope of this bibliography has been broadened to include human nutrition, animal industry, and other agricultural subjects not covered in the previous lists. This bibliography is organized in three parts:

- I. Publications of the United States Department of Agriculture, State Agricultural Experiment Stations, State Agricultural Extension Services, and Books and Pamphlets from other sources.
- II. Periodical and Serial Literature, classified by subject.
- III. Author and Subject Indexes.

Free distribution of the Bibliography of Agriculture is limited to Federal, State, and other public agencies. Those to whom free copies cannot be supplied may purchase this publication from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. Subscription price, \$3.75 per year. Single copies may be obtained for 35 cents.

Washington, D. C.

U. S. D. A. Miscellaneous Publication 337, Abbreviations Used in the Department of Agriculture for Titles of Publications, is followed in this publication.

Items marked with an asterisk (*) are ordinarily available in microfilm or photoprint only.

Except for printed publications of the Department of Agriculture, which are usually available in limited supply for free distribution, the publications listed herein are not available for free distribution from the Department. However, photoprint or microfilm copies of any publication listed may be obtained from the Library at the following prices:

MICROFILMS:

Periodical Articles.--A flat charge of 50 cents for any single article, from any single volume of a periodical, regardless of the length of the article.

Books and Serial Publications.--50 cents for each 50 pages or fraction thereof.

PHOTOPRINTS:

10 cents for each page of text, with a minimum charge of 50 cents per item.

ISOPTERA

- ADAMSON, A. M. Termites and the fertility of soils. Trop. Agr. [Trinidad], 20: 107-112. June 1943. 26 T754
Termite consumption of plant remains accelerates formation of humus; nest and runway building activities bring soil above surface and expose it to weathering and admixture with humus; tunnels promote aeration, drainage, etc. On the other hand, termites feeding in large numbers may seriously reduce amount of organic matter in soil; harvester termites denude parts of African velds causing erosion; soil surrounding large mounds may be deficient in calcium due to accumulation of calcium carbonate in the mounds. Further research is indicated, including study of feeding habits of termites and chemical composition of their building materials.
